

# Bring in a Scientist to promote science as a career

By the Tertiary Education Commission

Auckland, New Zealand

23 Jan 2019

## About this request

This will create a request for a scientist working in industry to come in and talk to your students. Clicking the create button will connect with volunteers from a range of sectors, professions and experience who have indicated their willingness to visit schools in your region.

Volunteers have signed up to share their knowledge, experience and enthusiasm about their jobs and experiences with your students.

This also includes resources on how to plan this activity around your classes, health and safety guidelines, and child protection requirements.

## What do scientists talk about?

- What they do. They might talk through ‘an average day’ at work.
- What education route they took. E.g. University, TAFE, Apprenticeship.
- What advice would they give young people hoping to get into their field.
- What I wish someone had told me when I was aged 14 or 16.

## Resources provided:

### Getting started.pdf

This guide covers everything you need to do before, during, and after the event with handy recommendations for making the most out of it.

[Download](#)

### Guest Speaker Guide.doc

This guide will help guest speakers get ready to present to your kids, especially if it's their first time presenting.

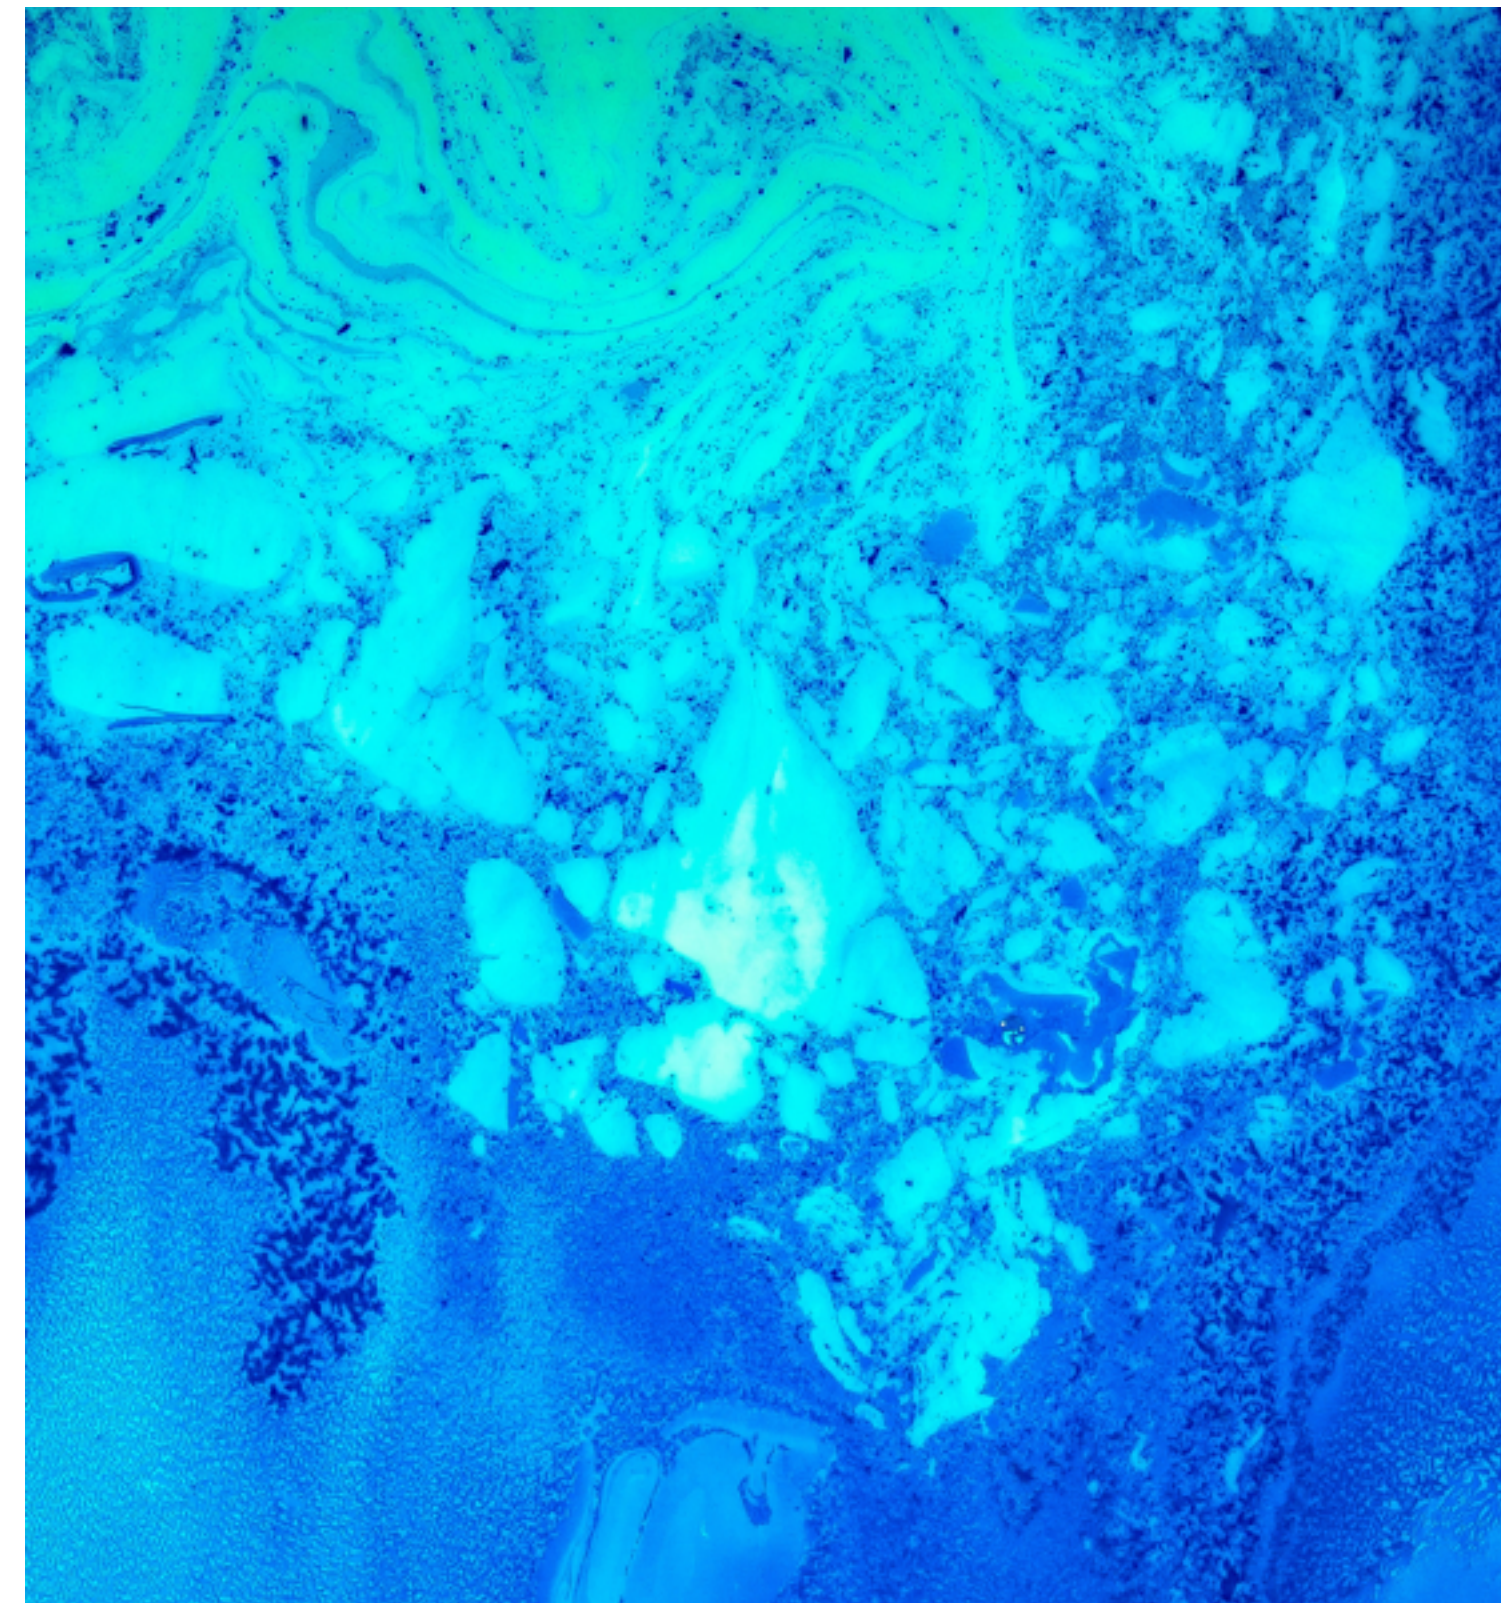

[Download](#)

### Class Guide.doc

This guide will help classrooms prepare for the event, and to gather interesting questions
